

JOSHUA WANG

joshuamwang@gmail.com | (954) 881-2127

EDUCATION

NYU GROSSMAN SCHOOL OF MEDICINE, New York, NY Expected May 2026
MD/PhD Candidate, Computational Biomedicine, 4.0/4.0

BROWN UNIVERSITY, Providence, RI May 2017
Bachelor of Science, Biology (Computer Science track), 3.9/4.0

EXPERIENCE

Marmar Lab – NYU Grossman School of Medicine, New York, NY January 2023 – Current
Research Collaborator

- Characterize the polymorphisms, epigenetic markers, and differentially expressed genes in 8 pre-defined neuropsychiatry pathways that are predictive of gabapentin treatment response in patients with alcohol use disorder.
- Build LASSO regression and random forest models to discover novel multi-modal signatures and genomic features.
- Develop computational pipelines to genotype, quantify transcripts, and call methylated regions.

Fenyo Lab – NYU Grossman School of Medicine, New York, NY March 2020 – Current
Graduate Student

- Develop machine learning models to infer clinical and molecular signatures directly from histopathology images and harness the power of omics research with the feasibility of image-based diagnosis.
- Train multi-resolution convolutional neural networks with Keras on imaging data from 1,600 patients to predict clinical annotations, histology outcomes, and critical mutations with AUCs exceeding clinical standards.
- Implement saliency mapping, activation maximization, and gradient class activation with Tensorflow to visually explain uncharacterized histology features of high predictive value and ensure that the model's decision-making process parallels medical intuition.
- Refine statistical techniques to correlate latent image features with proteogenomic expression datasets to identify pathway-level signatures driving tissue morphology changes and uncover biological insights conserved across multiple layers of the central dogma.
- Built linear regression and XGBoost trees to study biomarkers predictive of worsening COVID-19 severity.
- Quantified “fast-track” publication speeds across 200 journals from >150K PubMed records, and summarized collated results in R Shiny app for other scientific researchers: <http://time2pub.josh.wang>

Bennett Lab – Brown University, Providence, RI January 2014 – May 2017
Undergraduate Student Researcher

- Designed and developed Python scripts to identify genomic regions with mutation patterns violating inheritance by descent in *Candida albicans*. Created a data genome viewer: <http://snpmmap.asc.ohio-state.edu>
- Developed and deployed a R library to perform Gene Ontology enrichment for *C. albicans* research. Uses Selenium to request, pull and web scrape results from a canonical database lacking API access.
- Led a systematic investigation of RNA-Seq data to annotate novel untranslated regions and construct gene expression networks using weighted gene correlation network analysis.
- Established centralized computational server and wrote Bash, Python, and R pipelines to support lab efforts.

Regeneron Pharmaceuticals, Tarrytown, NY June 2015 – August 2015
Bioinformatics Intern

- Applied unsupervised clustering techniques to identify marker genes for proprietary disease conditions.
- Created a visualization platform to analyze single-cell transcriptome data: <http://scap.josh.wang>
- Presented internship project to Senior VP of Research as one of four interns selected out of 175.

SCHOLARSHIPS

NCI F30 Fellowship (F30 CA271622)

February 2023 – June 2025

NYU CTSI TL1 (TL1 TR001447)

January 2021 – December 2022

EXTRACURRICULAR

Machine Learning – NYU Grossman School of Medicine, New York, NY

September 2021 – Current

Graduate Teaching Assistant

- Wrote Python and R assignments to implement linear regression using analytic and numeric gradients, and code Principal Component Analysis by finding the eigenvalues and vectors from covariance matrix.
- Assisted in teaching different functions for activation, loss, optimization, weights initialization, and L1/L2 regularization to explore drawbacks including exploding gradients, weight decay, and overfitting.
- Held weekly office hours to review lecture materials and graded student submissions.

NYU Grossman School of Medicine, New York, NY

September 2019 – Current

Student Interviewer

- Interview MD/PhD applicants for the 2020-2021 cycle and write evaluations assessing social competency, personality fit, and research potential.
- Conduct MMI interviews for 2019-2020 cycle and score MD applicants based on verbal and behavioral responses.
- Contribute to question bank and debrief on applicant files to standardize notes across different interviewers.

Business and Economics in Medicine, New York, NY

December 2018 – December 2019

Co-President

- Hosted a career panel of industry physicians attended by 75+ medical students.
- Organized seminars addressing the financial determinants of health and teaching how health insurance works.

Brown University – Department of Computer Science, Providence, RI

January 2017 – May 2017

Teaching Assistant for CSCI 0040 (Introduction to Scientific Computing)

- Held open office hours to help students review concepts taught in lecture.
- Wrote weekly problem sets, developed semester projects, and graded student submissions.
